

Appendix A  
Marked-up Copy of Amended Claims

1. (Amended) A gel composition, comprising:  
an ester compound; and  
a polymer compound having at least one rigid block and one elastic block selected from the group consisting of triblock copolymers, star polymers, radial polymers, multi-block copolymers, and combinations thereof,  
wherein the gel composition is substantially free of mineral oils,  
wherein the ester is represented by one of the following formulas:

or

wherein n=1, 2, 3, and 4, and

R<sub>1</sub> includes hydrogen, hydrocarbyl, phenyl, methoxyphenyl, alkylphenyl, substituted alkyl, and substituted phenyl; R<sub>2</sub> includes hydrogen, hydrocarbyl, phenyl, methoxyphenyl, alkylphenyl, substituted alkyl, substituted phenyl, alkylene, phenylene, substituted alkylene, and substituted phenylene, and R<sub>3</sub> includes alkylene, phenylene, substituted alkylene, or substituted phenylene, and

wherein R<sub>4</sub>, R<sub>5</sub>, and R<sub>6</sub> individually include alkylene, phenylene, substituted alkylene, or substituted phenylene, and R<sub>7</sub>, R<sub>8</sub> and R<sub>9</sub> individually include hydrogen, hydrocarbyl, phenyl, methoxyphenyl, alkylphenyl, substituted alkyl, and substituted phenyl.

20. (Amended) A gel composition, comprising:

a compound selected from the group consisting of alcohols, ethers, naturally occurring fats and oils, and combinations thereof; and

a polymer compound selected from the group consisting of diblock copolymers, triblock copolymers, star polymers, radial polymers, multi-block copolymers, and combinations thereof.

25. (Amended) A method of making a gel composition, comprising:

mixing an ester compound with a polymer compound having at least one rigid block and one elastic block selected from the group consisting of triblock copolymers, star polymers, radial polymers, multi-block copolymers, and combinations thereof,

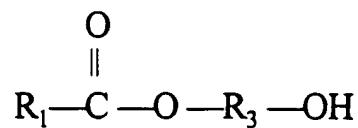

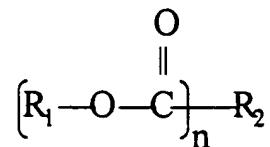

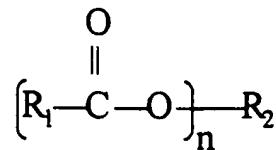

heating the mixture;

agitating the mixture until the mixture becomes homogeneous; and

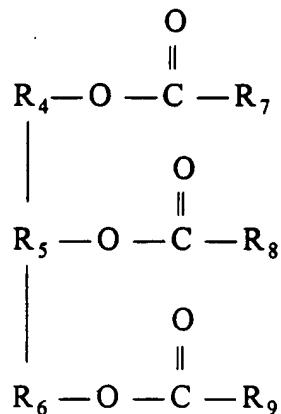

cooling the mixture,

wherein the gel composition is substantially free of mineral oils,

wherein the ester is represented by one of the following formulas:

or

wherein n=1, 2, 3, and 4, and

$\text{R}_1$  includes hydrogen, hydrocarbyl, phenyl, methoxyphenyl, alkylphenyl, substituted alkyl, and substituted phenyl;  $\text{R}_2$  includes hydrogen, hydrocarbyl, phenyl, methoxyphenyl, alkylphenyl, substituted alkyl, substituted phenyl, alkylene, phenylene, substituted alkylene, and substituted phenylene, and  $\text{R}_3$  includes alkylene, phenylene, substituted alkylene, or substituted phenylene, and

wherein  $\text{R}_4$ ,  $\text{R}_5$ , and  $\text{R}_6$  individually include alkylene, phenylene, substituted alkylene, or substituted phenylene, and  $\text{R}_7$ ,  $\text{R}_8$  and  $\text{R}_9$  individually include hydrogen, hydrocarbyl, phenyl, methoxyphenyl, alkylphenyl, substituted alkyl, and substituted phenyl.

26. (Amended) A method of making a gel composition, comprising:  
mixing an alcohol, an ether, and combinations thereof or a naturally occurring fatty oil with  
a polymer compound selected from the group consisting of diblock copolymers, triblock  
copolymers, star polymers, radial polymers, multi-block copolymers, and combinations thereof,  
heating the mixture;  
agitating the mixture until the mixture becomes homogeneous; and  
cooling the mixture.
